Platforms

NASA Earth Data Archive Size (PB)

	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025
Archive Size (PB)	15	17.7	21.6	26.8	32	37.2	55.6	103.4	151.1	198.9	246.6
Annual Growth (PB)	2.6	2.7	3.9	5.2	5.2	5.2	18.4	47.8	47.7	47.8	47.7

Not all data are made the same.

- **Availability:** Data are generally not available in real time.
- **Time (Temporal) Coverage:** Varies depending upon the platform, sensor, campaign and/or data product. Historical satellite datasets dating back several decades are available for some products.
- **Spatial coverage:** Varies by platform, sensor and/or data product. Global coverage is available for many data products.

- **Format:** Many of NASA's EOS satellite datasets are in either Hierarchical Data Format (HDF) or HDF-EOS format. Other data format output options are available, including but not limited to: NetCDF, GeoTIFF, CSV, Binary, KML, and more.
- **Tools and Services:** A variety of data discovery, access, visualization, subsetting, and GIS and cloud computing tools and services are available.

Needs & Challenges for Data Users

I need the data for the same time and geolocation across all of the data sets!

1. Data Discovery

*Plain language please!
How do I select the right data?*

netCDF? What? I need GeoTIFF!

Why are there different versions of the same dataset?

2. Dataset Selection

How does this data product relate to another? What value do they offer? Limitations?

Where are the R (or GEE) packages? I need direct access for my analysis!

3. Data Application

What are the use cases? How are they similar to mine?

Highlights of the Agriculture & Water Resources Data Pathfinder

Scope

Identify

Measurement	Satellite	Sensor	Spatial Resolution	Temporal Resolution
Elevation		Shuttle Radar Topography Mission (SRTM)	30 m	
Evaporative Stress Index, Evapotranspiration	International Space Station	ECOSystem Spaceborne Thermal Radiometer Experiment on Space Station (ECOSTRESS)	70 x 70 m, 30 x 30 m	Target areas every 1-7 days
Evapotranspiration, Land Cover Type, Land Surface Temperature, Snow Cover, Surface Reflectance, Vegetation Indices	Terra and Aqua	Moderate Resolution Imaging Spectroradiometer (MODIS) *	250 m, 500 m, 1 km	1-2 days
Groundwater	Gravity Recovery and Climate Experiment (GRACE)		0.125°	Giovanni: daily Earthdata: 7-day
Land Surface Temperature, Snow Cover, Surface Reflectance, Vegetation Indices	Joint NASA/NOAA Suomi National Polar-orbiting Partnership (Suomi NPP)	Visible Infrared Imaging Radiometer Suite (VIIRS) *	325-750 m	1-2 days
Land Surface Temperature, Surface Reflectance	Landsat 8	Operational Land Imager (OLI) Thermal Infrared Sensor (TIRS)	15, 30, 60 m	16 days
Precipitation	Integrated multi-satellite data	Tropical Rainfall Measuring Mission (TRMM) Multi-satellite	0.1° x 0.1° or 0.25° x 0.25°	half hourly, daily,

Land

Vegetation

Water

Vegetation is a key component of the overall Earth system. It plays a critical role in the movement of water and energy at various levels, including the ecosystem and landscape levels. Assessments of vegetation health, including vegetation greenness, land cover type, evapotranspiration, and evaporative stress, are critical to monitoring agricultural practices and water resource availability and for deciding when to irrigate.

Access

Subset

Vegetation Greenness

Land Cover/ Crop Extent

Evapotranspiration

Evaporative Stress

Vegetation products created from data acquired by the MODIS instrument aboard NASA's Terra and Aqua satellites and the Visible Infrared Imaging Radiometer Suite (VIIRS) instrument aboard the joint NASA/NOAA Suomi National Polar-orbiting Partnership (Suomi NPP) satellite can be accessed in several ways. Research quality surface reflectance data products can be accessed directly using Earthdata Search (datasets are available as in HDF format but are, in some cases, customizable to GeoTIFF):

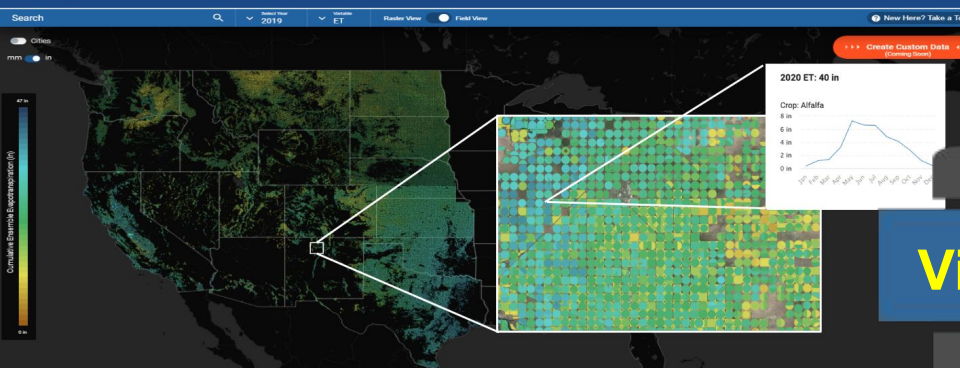

- [MODIS Vegetation Indices](#)
- [VIIRS Vegetation Indices](#)

AppEEARS[®], available through NASA's Land Processes Distributed Active Archive Center (LP DAAC), is an easy and effective way to extract, transform, visualize, and download MODIS and VIIRS products. AppEEARS allows users to subset data by defining specific geographic areas that can be downloaded in CSV (point), GeoTIFF (area), or NetCDF4 (area) formats.

Near real-time imagery can be interactively explored using NASA Worldview (Note: The Terra/MODIS NDVI (rolling 8-day) and EVI (rolling 8-day) are only available in Worldview for the last 20 days; older NDVI or EVI imagery are available using the Level 3, 16-Day, or Monthly Vegetation Index and EVI layers):

- [MODIS NDVI](#)
This dataset has a spatial resolution of 250 m and the temporal resolution is an 8-day product, updated daily; 16-day and monthly data are also available in Worldview
- [MODIS EVI](#)
This dataset is monthly at 1 km spatial resolution

Addressing Wicked Problems with NASA Data

Since 2015, the number of “food insecure” people who do not have sufficient access to consistent, good quality nutrition continues to increase.

We know that climate change will affect agricultural production worldwide.

Turning

Needs

into

Opportunities

Data Saturation

- Rise in ability to collect data hasn't been matched by ability to support, filter, and manage them. (Forbes Magazine, U.S. Air Force)
- Increase in the number of different measurements required to address the key science questions. (The Fourth Paradigm: Editors -Hey, Tansley, Tolle)

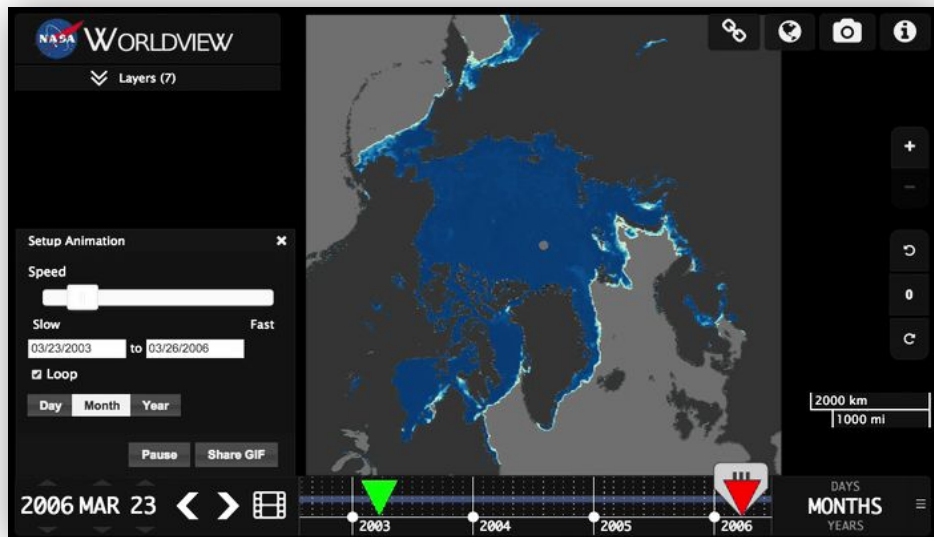

*Earth Science is **evolving** and we must keep up.*
